Risk

# Social Determinants of Health

# Definition of Care Coordination

*“Care coordination is the **deliberate organization of patient care activities between two or more participants** (including the patient) involved in a patient's care to facilitate the appropriate delivery of health care services. Organizing care involves the marshalling of personnel and other resources needed to carry out all required patient care activities and is often managed by the exchange of information among participants responsible for different aspects of care.”*

**AHRQ Care Coordination Measures Atlas Update, June 2014**

Direct  
Services =  
Intervention

Care  
Coordination =  
clinic based

Community  
Care  
Coordination =  
home based

**Community Care Coordination – care coordination provided in the community; confirms connection to health and social services.**

## **A Community Care Coordinator:**

- Finds and engages at-risk individuals
- Comprehensive risk assessment
- Confirms connection to care
- Tracks and measures results

# Role of a Care Manager in PCMH

- Often a nurse or social worker
- Develops and monitors individualized care plans for patients
- Provides patient education and training in self-managements skills
- Coordinates care with other providers and settings
- Connects patient to community resources and social services
- Participates in QI activities in the practice

Annals of Family Medicine, Vol. 11, No. 1, January/February 2013

# Role of a Community Care Coordinator

- Many different types of professionals, including:
  - **Community health workers**
  - Social workers
  - Behavioral health case managers
  - Nurses
- Meets face to face with clients in a community setting, including the home.
- Connects patient to community resources, social services and health services.
- Provides education and monitors care plans.
- **Works collaboratively with care managers in a variety of settings – managed care, PCMHs, hospitals**

# Why do we need Community Care Coordination?

- More than  $\frac{1}{2}$  of patients can't state their diagnosis when leaving the hospital.
- More than  $\frac{1}{3}$  of patients can't explain their medications.
- Less than  $\frac{1}{2}$  of patients saw a primary care physician within 2 weeks of leaving the hospital.
- 1 in 5 patients has an adverse event transitioning from hospital to home. ***2 out of 3 events are related to prescriptions!***

## Percentage of Physicians Identifying Problems Coordinating Care with Different Providers and Entities

Chart from the Robert Wood Johnson Foundation: <http://rwjf.org/pr/product.jsp?id=50968>.

# Care Coordination

“While all experts with whom we spoke agreed that better communication with community organizations and social services is critical, especially for Patient Centered Medical Homes (PCMHs) that focus on treating low-income patients or frail elders, *many describe the connections with the broader community as the most challenging for the medical neighborhood at large.*”

. . . connections between primary care and community services . . . *simply are absent or highly fragmented and disorganized.*”

AHRQ #11-0064: White Paper on Coordinating Care in the Medical Neighborhood

Kotzebue Alaska, Spring 1991

**To eliminate health and social disparities in our community by finding those at risk, connecting them to care, and measuring the outcomes.**

# CHW Certification in Ohio

- Ohio certification of CHWs began in July 2004 (legislation), law regulating CHWs signed in 2005
- Based on 6 competency areas (230 hours: 100 didactic and 130 practicum)
- “certificate to practice”
- 15 hours of continuing education every 2 years

# Initial Results

Disappointing . . . . . No change in data.

Hard to capture all of the work CHWs were doing.

*. . . . . Needed a better strategy!*

# “Typical” Family at Risk

**Marisol, 28**

- **Pregnant**
- **Lost housing**
- **Car isn't working well**
- **Afraid of losing job**

**Marcus, 6**

- **Needs new medical home**
- **Frequent ED visits**
- **No asthma action plan**
- **Struggling at school**

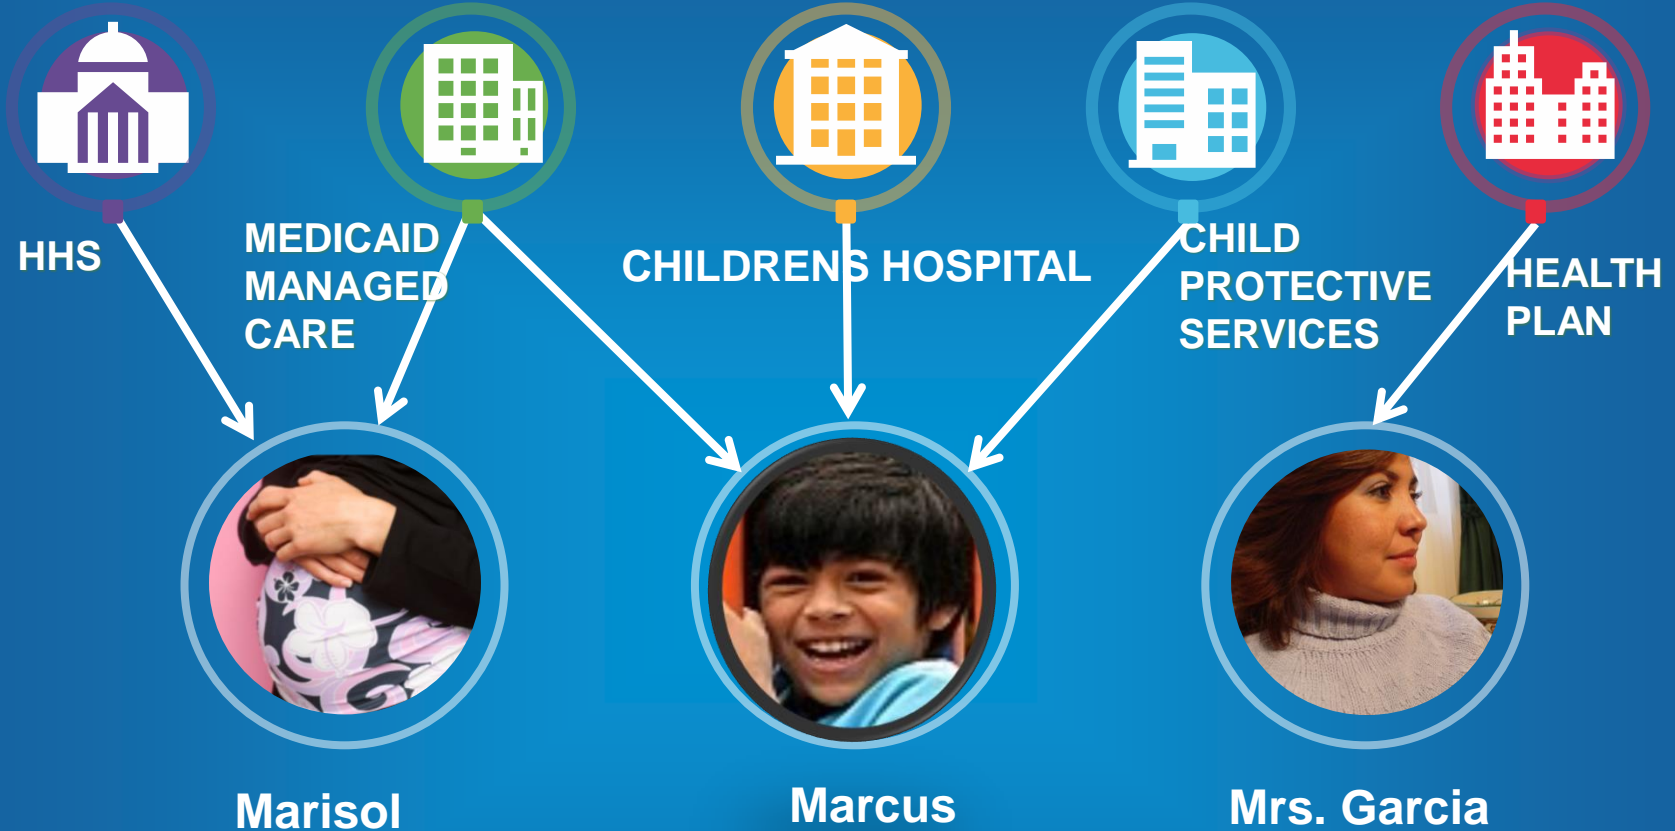

**Mrs. Garcia**

- **One bedroom apartment**
- **Works part-time**
- **Type 2 Diabetes**
- **Smoker**

# Current Community Care Coordination

Multiple care coordinators involved –  
limited communication

# Foundation of the Model

**Step 1:  
Find**

**Comprehensive Risk  
Assessment**

**Step 2:

### Medical Home Pathway

#### Initiation

Client needs a medical home (an ongoing source of primary medical care).

Determine payment source for health care

Find appropriate primary medical provider options for payment source.

1. Obtain release of information from client.
2. Assist family in scheduling appointment.
3. Provide education about the importance of keeping the appointment - Use education sheet.

#### Completion

Confirm that appointment was kept.

**Abstract** The evidence is limited on the effectiveness of home visiting care coordination in addressing poor birth outcome, including low birth weight (LBW). The Community Health Access Project (CHAP) utilizes community health workers (CHWs) to identify women at risk of having poor birth outcomes, connect them to health and social

Women participating in CHAP and having a live birth in 2001 through 2004 constituted the intervention group. Using birth certificate records, each CHAP birth was matched through propensity score to a control birth from the same census tract and year. Logistic regression was used to examine the association of CHAP participation

## The GREEN Zone (also known as the safety zone)

### Symptoms

- Breathing is easy
- No cough or wheeze
- Can do usual activities
- Can sleep through the night

Peak flow from  to

Use these long-term control medicines as listed:

Medicine	How much	How often / when
<input type="text"/>	<input type="text"/>	<input type="text"/>
<input type="text"/>	<input type="text"/>	<input type="text"/>
<input type="text"/>	<input type="text"/>	<input type="text"/>

## The YELLOW Zone (also known as the caution zone)

### Symptoms

- Some shortness of breath
- Cough, wheeze, or chest tightness
- Some difficulty doing usual activities
- Sleep disturbed by symptoms
- Symptoms of a cold or flu

Peak flow from  to

Continue with long-term control medicines as above, and add these quick-relief medicines:

Medicine	How much	How often / when
<input type="text"/>	<input type="text"/>	<input type="text"/>
<input type="text"/>	<input type="text"/>	<input type="text"/>

Call your doctor if:

## The RED Zone (also known as the danger zone)

### Symptoms

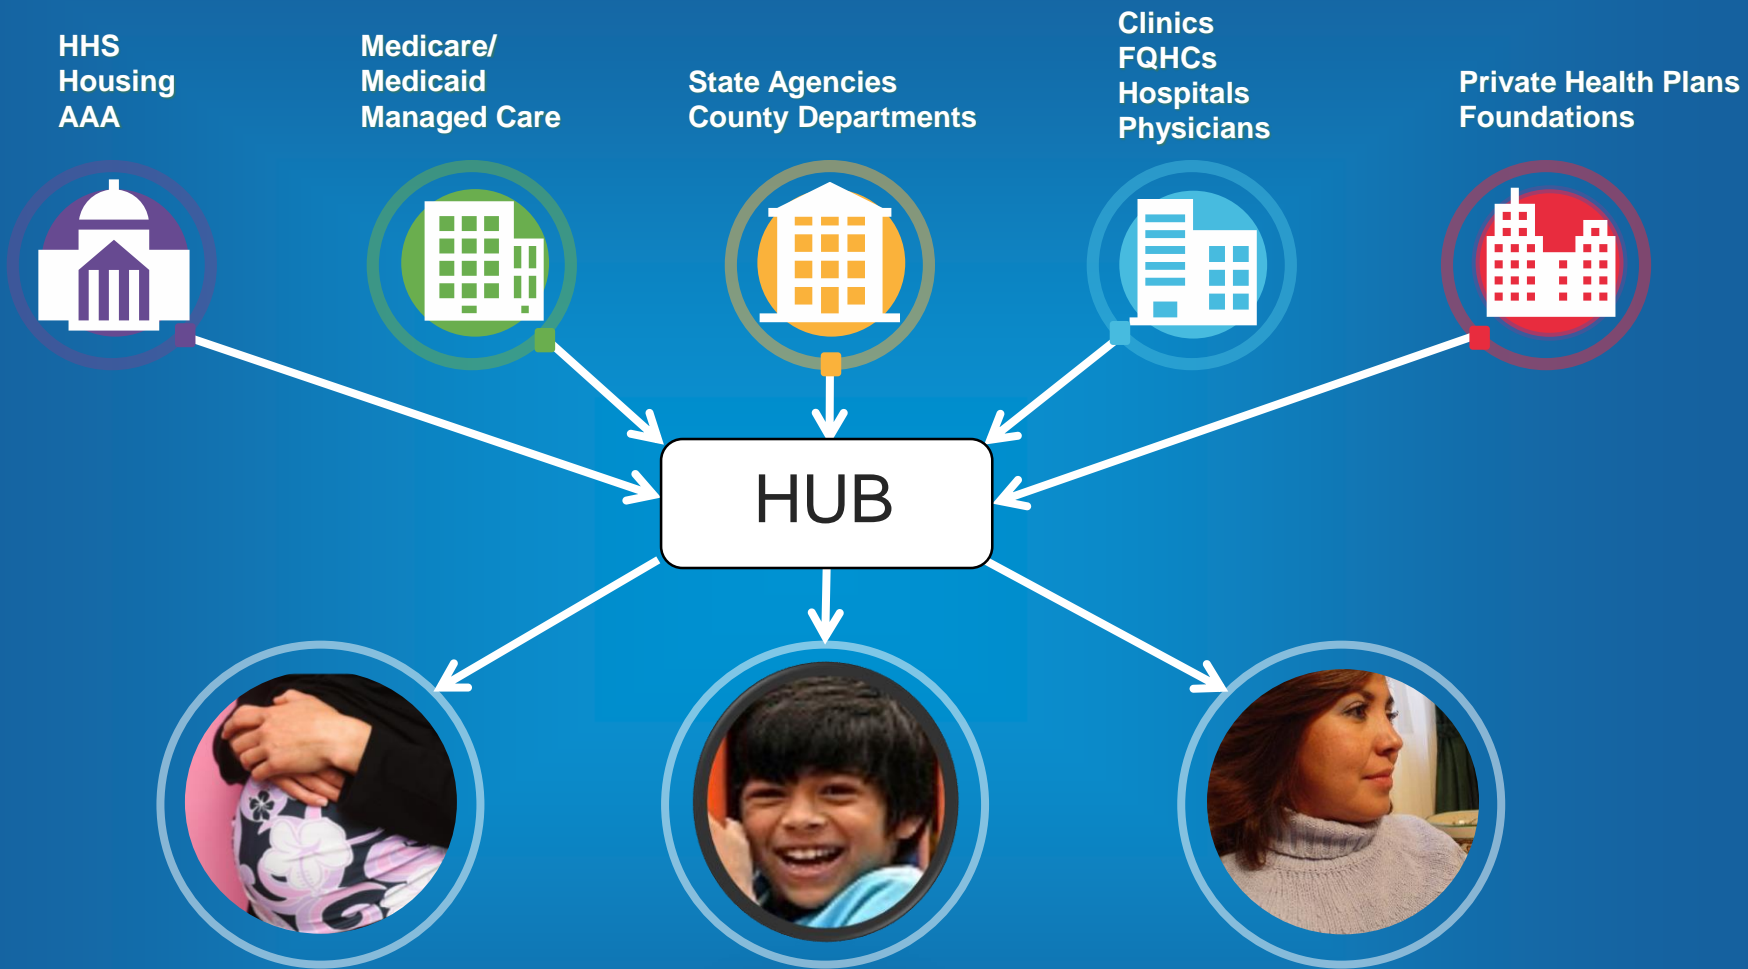

- Severe breathing problems
- Cannot do usual activities
- Difficulty walking and talking
- Rescue medicine is not helping

Peak flow from  to

Take this medicine and call the doctor now!

Medicine	How much	How often / when
<input type="text"/>	<input type="text"/>	<input type="text"/>
<input type="text"/>	<input type="text"/>	<input type="text"/>

If symptoms don't improve and you can't contact the doctor, go to the hospital or call 911.

**One Care Coordinator for the Entire Family**

# Distinctions between Pathways & HUB

## Pathways

- Patient-centered, care coordination tool
- Identifies and “translates” patient risks
- Measured outcomes
- Payments for measured Pathway outcomes

## Community HUB

- Tracks Pathways (outcomes) across agencies
- Eliminates duplication
- Streamlines referrals
- Provide infrastructure for community-based care coordination
- Involve braided funding – Pathways can be purchased by different funders

### Percentage of NW Ohio Pathways Clients Attending Post-Partum Appointment 2012-2014

In 2013, 63% of women on Medicaid attended post-partum appointment within 90 days

# Medicaid Costs: PER MEMBER PER MONTH

B4-B1: 6 month periods before the beginning of MPBH (Jan 2011 – Dec 2012)

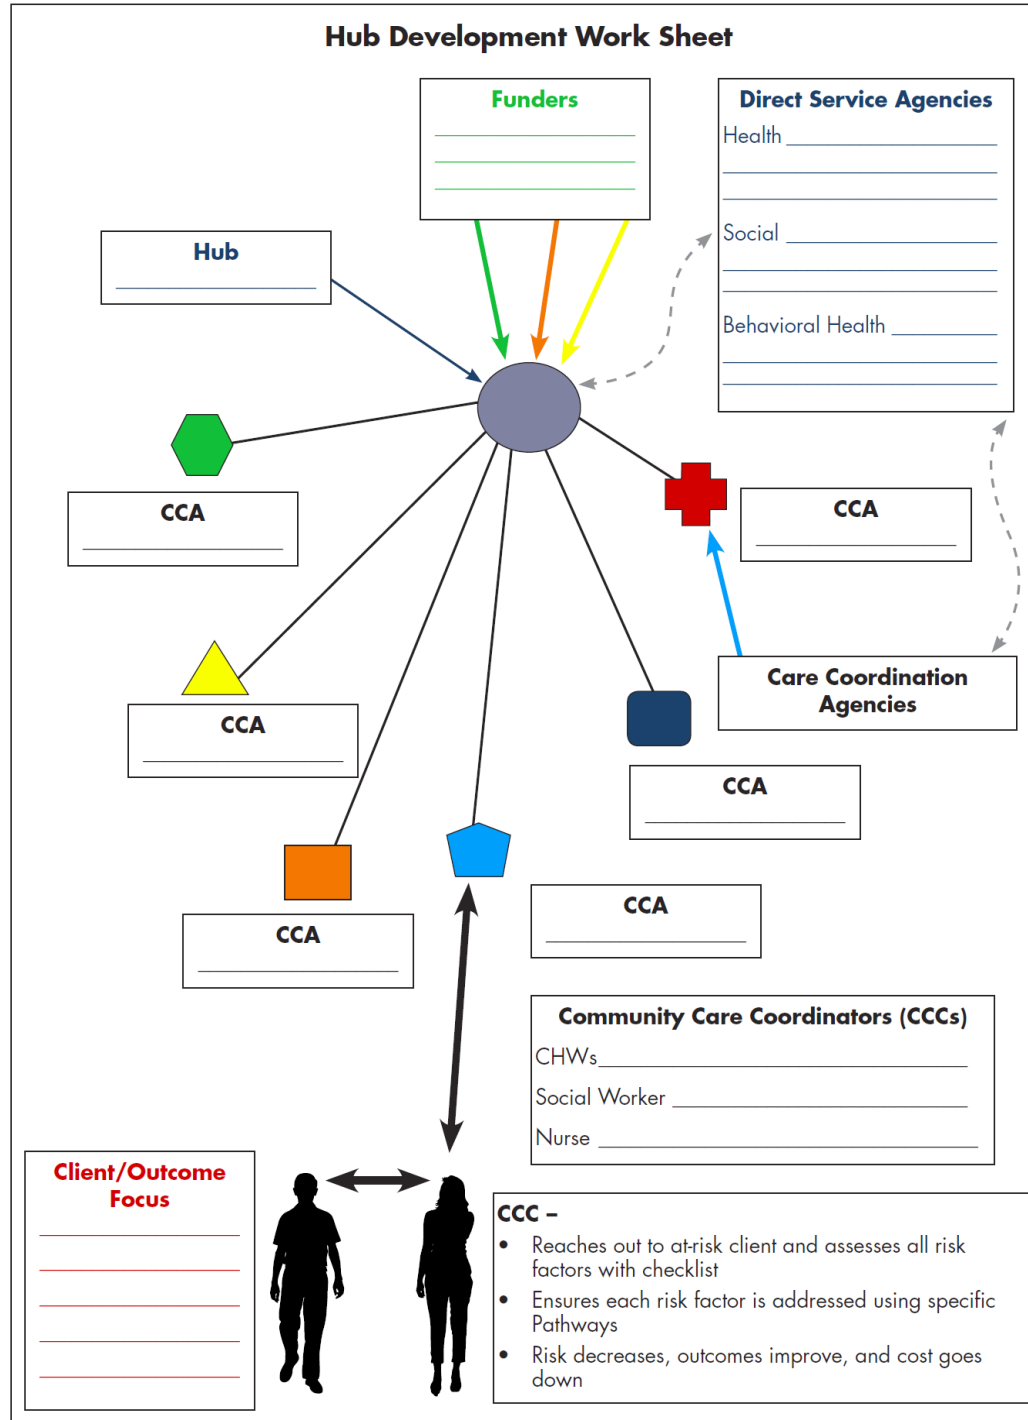

T1-T3: 6 month periods since MPBH services began (Jan 2013 – June 2014)

★ : indicates cohort enrollment into MPBH

# Key Points in Building a HUB

- The HUB must be a neutral entity in the community and cannot employ its own care coordinators.
- There is only one Pathways Community HUB in a community or region.
- The HUB must be an independent legal entity or an affiliated component of a legal entity.
- The HUB must be based in the community or region it serves.
- There must be a Community Advisory Board made up of members reflecting the community or region the HUB serves.

## HOME

ACHIEVING BETTER CARE, BETTER OUTCOMES, AT LOWER COST

## HUB Certification Pre-requisites & Standards

### Pre-requisites

- 1) The Pathways Community HUB (HUB) must be an established community-based organization.
- 2) The HUB has utilized the HUB model for a minimum of six months.
- 3) The HUB is the only HUB in its regional service area.
- 4) The HUB has documentation of coordinating a network of agencies, comprised of a minimum of two agencies, each having at least one care coordinator with assigned caseloads of active at-risk clients identified within the agency's respective service area.
- 5) The HUB is able to contract with more than one payer on behalf of participating agencies.
- 6) The HUB is tracking outcomes using standard Pathways.
- 7) The HUB ties measured outcomes and results to dollars within financial contracts with payers.
- 8) The HUB has written program requirements and documentation to include client eligibility for services.
- 9) The HUB has written policies to ensure HIPAA-compliant client privacy and personal health information protections.
- 10) The HUB is an independent legal entity or an affiliated component of a legal entity.
- 11) The HUB is free of actual and perceived conflicts of interest (e.g., the HUB cannot employ care coordinators).

# Pathways Community HUB Model

- Removes “silos” and fragmentation
- Uses existing community resources efficiently and effectively
- Focuses on common metrics to identify & track risks (risk reduction)
- Holistic community care coordination one care coordinator
- Pays for outcomes – sustainable
- Owned by the community
